M8000

For Fast Processing of
Your Most Challenging
Mail Jobs

HASLER
America's better choice.®

**FOLDING, STUFFING AND SEALING ENVELOPES
BY HAND WASTES VALUABLE TIME, MONEY
AND RESOURCES. OUTSOURCING IS NOT THE ANSWER...**

THE M8000 IS YOUR SOLUTION.

With Hasler's M8000, you can automate difficult, high volume mailings with ease. The M8000 is a powerful, versatile, automatic folder/inserter system which boosts productivity by enabling busy offices and mail centers to process volume mailings at a rate of 4,300 filled envelopes per hour. With the power of the M8000, virtually anyone can handle the task quickly, efficiently, and in-house.

**Perform four tasks, for up to eight pages,
in one pass**

The high-capacity M8000 collates, folds, inserts and seals documents up to eight pages --- stapled or loose --- all in a single pass. Now you can automate all your mailings, including letters, checks, cards, invoices, statements and marketing materials, even pre-folded flyers!

- **Small Footprint** --- fits in any office environment
- **Extremely quiet** --- with its low noise level, the M8000 is ideal for any business
- **Easy to use** --- automatic job set-up means virtually anyone can operate with ease
- **Flexible** --- three configurations with 2, 4 or 6 stations, optional in-line metering and Optical Mark Recognition
- **Programmable** --- program up to 20 different jobs for quick recall
- **Versatile** --- handles up to eight pages stapled or loose and a wide variety of paper sizes, as well as daily mail applications

PowerFold® 8 technology produces professional results

With PowerFold® 8 folding technology built into the M8000, you can collate up to eight pages of varying sizes in any order and tri-fold the entire set to fit neatly into an envelope for a clean, professional presentation. All documents accumulate before folding, which eliminates lost pages and keeps sets in the right order. Sharp, crisp folds include C, Z, single and double parallel. The highly versatile M8000 also accommodates bottom address applications.

Multiple configurations provide maximum flexibility

The M8000 can be configured with two, four, or six stations to meet your specific needs. You have a choice of two exits, which allows for in-line metering, batching, or high-capacity stacking. With its remarkably small footprint, the M8000 requires very little space, regardless of the number of stations you're using.

Suitable for small runs and a variety of applications

Hasler's FlexFeed® feed trays are designed to handle a variety of document sizes and thicknesses so there is no need to purchase separate feeders. This makes it easy to switch applications for small runs and allows for a variety of automated applications. Plus an optional high capacity feeder can be added to hold up to 325 Business Reply Envelopes (BRE) or 1,200 full sheets for high volume applications.

Incredibly easy to operate --- just "Fill and Start"

For occasional applications or novice users, the "Fill and Start" feature allows you to simply load your documents and envelopes and run the job. The M8000 automatically calculates the size of the documents and sets the correct fold. Operation for the whole system is monitored from an easy to use control panel with automatic set-up. The system automatically stores your "Fill and Start" settings when switched off, or you can permanently store those settings to one of the 20 programmable jobs for future recall.

Double Document Detection (DDD) system guarantees mail integrity

Each feed station and the insert area of the M8000 are equipped with Double Document Detection (DDD). State-of-the-art electromechanical sensors measure actual material thickness rather than paper density using light to ensure the correct number of inserts is fed from each feeder. This technology provides superior accuracy regardless of the color, texture, or thickness of paper.

Optical Mark Recognition (OMR)

Hasler's optional OMR software allows the M8000 to process sensitive jobs with varying numbers of pages easily and accurately. Hasler's unique IntelliRead™ software option enables the printer to generate the OMR marks necessary to perform such mailings. A combination of these state-of-the-art options prevents you from sending personalized documents to the wrong addressee.

HaslerFlash makes service easy

With HaslerFlash software the M8000 can be connected to a PC or laptop, allowing service technicians to upload the latest software versions and download machine performance reports. The result is optimum machine performance and quicker system recovery which translates to minimal downtime and maximum productivity.

Clamshell Design

The unique clamshell design gives you quick, safe and simple access into the insert area. If a stoppage occurs, clearance is quick and easy, so your M8000 can get back to business without missing a beat.

The M8000 brings production capability to your office!
